

WORLD ENVIRONMENTAL CONFERENCE ON ASPARTAME

from the library of Robert L. Talley, DDS.

Marketed as "Nutrasweet", "Equal" and "Spoonful"

In the keynote address by the EPA at the World Environmental Conference, it was announced that there was an epidemic of multiple sclerosis and systemic lupus and they did not understand what toxin was causing this to become rampant across the United States.

When the temperature of Aspartame exceeds 86°F, the wood alcohol in Aspartame converts to formaldehyde and then to formic acid, which, in turn, causes metabolic acidosis. Formic acid is the poison found in the sting of fire ants. The methanol toxicity mimics multiple sclerosis; thus, people are being diagnosed with multiple sclerosis in error. Multiple sclerosis is not a death sentence; methanol toxicity is.

Systemic lupus has become almost as rampant as multiple sclerosis, especially in Diet Coke and Diet Pepsi drinkers. With methanol toxicity, the victims usually drink three to four 12 oz. cans per day, some even more. In the cases of systemic lupus, which is triggered by Aspartame, the victim usually does not know that the aspartame is the culprit. The victim continues its use and aggravates the lupus to such a degree, that it sometimes becomes life threatening. When people quit using Aspartame, those with systemic lupus usually become asymptomatic. Unfortunately, this disease cannot be reversed. On the other hand, in the case of those diagnosed with multiple sclerosis, (when in reality, the disease is methanol toxicity), most of the symptoms disappear. In some cases, vision and hearing have returned. This also applies to cases of tinnitus.

If you are using ASPARTAME (Nutrasweet, Equal, Spoonful, etc.) and you suffer from fibromyalgia symptoms, spasms, shooting pains, numbness in your legs, cramps, vertigo, dizziness, headaches, tinnitus, joint pain, depression, anxiety attacks, slurred speech, blurred vision or memory loss, you probably have ASPARTAME DISEASE!

The Ambassador of Uganda noted that their sugar industry is adding aspartame. He continued by saying that one of the industry leader's sons could no longer walk due in part of product usage. This is a very serious problem. Additionally, during a visit to a hospice, a nurse said that six of her friends, who were heavy Diet Coke drinkers, had all been diagnosed with MS. This is beyond coincidence!

Here is the problem. There were Congressional Hearings when Aspartame was originally included as a sweetener in 100 different products. Since this initial hearing, there have been two subsequent hearings. Nothing has been done. The drug and chemical lobbies have very deep pockets. Now, there are over 5,000 products containing this chemical and the PATENT HAS EXPIRED! At the time of this first hearing, people were going blind. The methanol in the Aspartame converts to formaldehyde in the retina of the eye. Formaldehyde is grouped in the same class of drugs as cyanide and arsenic - DEADLY POISONS! Unfortunately, it just takes

longer to quietly kill, but it is killing people and causing neurological problems. Aspartame changes the brain's chemistry. It is the reason for severe seizures. This drug changes the dopamine level in the brain. Imagine what this drug does to patients suffering from Parkinson's Disease. This drug also causes birth defects.

There is absolutely no reason to use this product. It is NOT A DIET PRODUCT! The Congressional record said, "It makes you crave carbohydrates and will make you FAT." Dr. H.J. Roberts, a diabetic specialist and expert on Aspartame poisoning, states that when he took patients off of Aspartame, their average weight loss was 19 pounds per person. The formaldehyde stores in the fat cells, particularly in the hips and thighs.

Aspartame is especially deadly for diabetics. All physicians know what wood alcohol will do to a diabetic. We find that physicians believe that they have patients with retinopathy when, in fact, it is caused by the Aspartame. The Aspartame keeps the blood sugar level out of control, causing many patients to go into a coma. Unfortunately, many have died. It was reported at the Conference of the American College of Physicians that those patients that switched from saccharin to an Aspartame product had eventually gone into a coma. Their physicians could not get their blood sugar levels under control. The patients suffered acute memory loss and, eventually, coma and death. Memory loss is due to the fact that aspartic acid and phenylalanine are neurotoxic without the other amino acids found in protein. Thus, it goes past the blood brain barrier and deteriorates the neurons of the brain. Dr. Russell Blaylock, a neurosurgeon, said, "The ingredients stimulate the neurons of the brain to death, causing brain damage of varying degrees."

Dr. Blaylock and Dr. Roberts will be writing a position paper with some case histories and will post it on the Internet. According to the Conference of the American College of Physicians, "We are talking about a plague of neurological diseases caused by this deadly poison." Dr. Roberts realized what was happening when aspartame was first marketed. He reported, "My diabetic patients are suffering memory loss, confusion and severe vision loss." At the Conference, doctors admitted not knowing why. They had wondered why seizures were rampant (the phenylalanine in Aspartame breaks down the seizure threshold and depletes serotonin, which causes manic depression, panic attacks, rage and violence). Just before the Conference, Norway asked for a possible antidote for this poison because they are experiencing so many problems in their country. This EUR '3 poison' is now available in 90 PLUS countries worldwide. Fortunately, speakers and ambassadors at the conference from different nations have pledged their help.

Take anything that contains aspartame back to the store. MONSANTO, the creator of aspartame, knows how deadly it is. They fund the American Medical Association, American Dietetic Association Congress and the Conference of the American College of Physicians.

On November 15, 1996, the New York Times ran an article on how the American Dietetic Association takes money from the food industry to endorse their products. Therefore, they can not criticize any additives or tell about their link to MONSANTO. How bad is this? A mother who had a child on NutraSweet was told to get off the product. The child was having grand mal seizures daily. The mother called her physician, who called the ADA and was told not to take the

child off of NutraSweet. The mother cannot be convinced that the Aspartame is causing the seizures. Every time someone gets off of Aspartame, seizures stop.

There are 92 documented symptoms of aspartame, from coma to death. The majority of them are neurological because Aspartame destroys the nervous system. Aspartame Disease is partially behind some of the mystery of the Desert Storm health problems. The burning tongue and other problems discussed in over 60 cases can be directly related to the consumption of Aspartame. Several thousand pallets of diet drinks were shipped to the Desert Storm troops. (Remember: heat can liberate the methanol from the aspartame at 86°F.) These diet drinks sat in the 120°F Arabian sun for weeks at a time on pallets. The servicemen and women drank them all day long. All of their symptoms are identical to aspartame poisoning.

Additionally, Dr. Roberts says, "Consuming Aspartame at the time of conception can cause birth defects." According to Dr. Louis Elsas, Pediatrician and Professor of Genetics at Emory University, in his testimony before Congress, the phenylalanine concentrates in the placenta, causing mental retardation. In the original lab tests, animals developed brain tumors; phenylalanine breaks down into DXP, a brain tumor agent.

When Dr. Espisto was lecturing on Aspartame, one physician in the audience, a neurosurgeon, said, "When brain tumors are removed and studied, high levels of Aspartame were found in them."

Stevia, a sweet food and NOT AN ADDITIVE, helps in the metabolism of sugar. It would be ideal for diabetics and has now been approved as a dietary supplement by the FDA. For years, the FDA has outlawed this sweet food, because of their loyalty to MONSANTO. If it says SUGAR FREE on the label - DO NOT EVEN THINK ABOUT IT.
